

HAGOLOOP®

Loop tape

the woven, dimensionally stable loop tape for well-closing aluminium Venetian blinds.

THE WOVEN HAGOLOOP® LOOP TAPE

a convincing alternative to braided cords.

YOUR ADVANTAGES

- exact pitches
- lowest shrinkage
- minimum elongation
- high weather resistance
- stable, permanently fixed loops

The weaving technique

Due to the rectangular crossing of warp and weft threads during the weaving process, the warp threads are nearly straight in the tape. This results in a good longitudinal stability. The additional double aramid reinforcement with UV protection ensures minimal stretch.

Thanks to the heat-setting, shrinkage and stretching are kept to a minimum. The loop cord is fed directly during weaving and double woven-in. This results in stable loops with good tear-out resistance.

Loop shape

The loops are available with an inner width of 3.5 mm and an inner height of 8.0 mm or 5.0 mm. Special designs on request.

Beautiful appearance

Thanks to the woven-in predetermined bending-points in the middle between two loops, the tape forms uniform loops.

Freely selectable and uniform pitch spacing

The spacing of the loops can be selected between 40 and 150 mm. The standard pitches are 60 and 80 mm. Other pitches on request.
